PROJECTS

ViaSocket EBL
- Gives you webhooks, CRONs and backend of forms to easily collect data and take actions on it. Can be used to integrate multiple third party APIs and automate workflows. https://app.viasocket.com

ViaSocket BaaS
- Allows developers & designers build scalable and fault tolerant backend with the power of auto-scalable servers, flexible DB and no-code API builder. https://baas.viasocket.com

Hitman
- Postman alternative to test internal and third party APIs, and host public API docs easily. https://hitman.viasocket.com

AccSoftware
- It is my **individual project** in which I developed a responsive account management web application in which one can manage & track his daily expenses according to his income and plan his budget accordingly.
- Technologies used - Angular, HTML5, CSS3, Bootstrap, TypeScript, Java, Spring Framework, Spring REST, Hibernate, MySQL.
